

TelePro IP-PBX Enterprise telephone system

TelePro IP-PBX is an integrated IP based communication solution for enterprise wide networks. This next generation, open standards, robust & flexible telephony solution integrates with existing legacy PSTN voice interfaces, thereby enabling next generation Voice over IP capability along with generic PBX functionality, through a single point, easy to use interface.

What is an IP-PBX?

By leveraging the convergence of Voice and Data systems, an IP based PBX system (commonly known as an IP-PBX) allows an enterprise to deploy and manage both voice and data networks, over a common physical layer (i.e. the LAN in an enterprise network). The IP-PBX system developed by Prologix allows enterprises to exploit this existing LAN infrastructure to deliver full voice delivery capability. By setting up the IP-PBX server software and configuring an inexpensive Voice gateway, offices can do away with expensive, proprietary EPBX systems.

IP-PBX: Where it fits into your network

Salient Features

TelePro IP-PBX is an open standard, SIP based Voice over IP enterprise telephone system. Designed to meet the complete voice messaging needs of an enterprise, IP-PBX can seamlessly create an interface between the external PSTN network and the internal data network within an organisation.

TelePro also provides all features of high end PBX systems (such as DID, call forwarding, profile management, voice mail, etc.) through easy to use web and software based interfaces.

Support for VoiceXML 2.0 based Application servers, additional Speech Recognition, Text to Speech and specialised Media Servers enables organisations using IP-PBX to plan for enhanced services such as Auto-Attendant, Unified messaging, Conferencing, etc.

In addition, TelePro IP-PBX is also capable of deploying next generation IVR interfaces used for managing customer support and helpline solutions – all over a common infrastructure.

Feature list

- Call transfer
- Auto Attendant
- Fast Dial
- RNA (Ring No Answer)
- Internal/ External forwarding
- Audio Conferencing
- Web based profile management
- Configurable Timeout rings
- Personalised Greetings
- Message Waiting Indicators
- Profile Selection
- Phantom users
- Application binding
- DID (Direct Inward Dialling)
- Voice mail
- Priority Settings
- Warning signal
- Supports IP as well as Analog phones
- Call Record Generation
- Easy dial plan builder
- Multiple IP-PSTN Gateway support
- Interworked with Pingtel xpressa, Cisco 7960 IP phones

| Key Benefits | | |
|--|---|-------------------------------------|
| Lower investment | <p><i>No need for separate EPBX equipment:</i> By doing away with expensive proprietary EPBX systems, enterprises can make significant savings in procurement, deployment and maintenance costs of their voice networks.</p> | <input checked="" type="checkbox"/> |
| Savings in equipment, maintenance and operation | <p><i>The VoIP advantage:</i> Offices in multiple locations use the same data network. The IP-PBX allows them to use the same voice network using the existing data links.</p> | <input checked="" type="checkbox"/> |
| Savings on cabling costs | <p><i>Common physical layer infrastructure:</i> With IP-PBX the existing data network cables also carry voice.</p> | <input checked="" type="checkbox"/> |
| Savings on handset costs | <p>Soft phones can replace a large percentage of handsets.</p> | <input checked="" type="checkbox"/> |
| Easier to scale | <p>Flexibility in scaling. IP-PBX can scale as per the organization's need. There is no minimum chunk size for expansion. The system can expand as easily by 100 lines as it can by 1.</p> | <input checked="" type="checkbox"/> |
| Safer and lower investment | <p>Flexibility in usage. IP-PBX is based on an Open Standard technology. Users of IP-PBX are never locked into a proprietary architecture. They have freedom to mix and match components from best in class vendors for future requirements</p> | <input checked="" type="checkbox"/> |

TelePro IP-PBX is the ideal telephone system for enterprises looking for a future ready, feature packed high end PBX solution without the associated costs of the same.
